

MESO-TOX MEDICS - ONLY

- “Meso-Tox” is a safe way of improving the texture and tone of the skin.
- It is a way of bridging the gap for patients who are not ready to make the jump into having traditional dermal fillers and botulinum toxin.
- Meso-Tox is the injection of multiple microdroplets of diluted Botulinum Toxin A into the dermis of the skin.
- Toxins are more dilute than what is normally used for muscle relaxing treatments, as it is mixed with mesotherapy products.
- It is not muscle specific.
- Treatment for large areas of the dermis to help improve skin complaints ie. overactive sebum production.
- (Tonks, S. Mesobotox. Aesthetics Journal 2014)

ADVANTAGES - MESO-TOX

- It is a safe way of improving the texture and tone of the skin.
- Can give and create a more subtle over-all result compared with using botulinum toxin alone.
- Can be used effectively on all skin types.
- Reduces sebum production & shrinks pore size, in turn improving acne.
- Improves fine lines & wrinkles by weakening the pull of the superficial facial depressors.
- Blocks production of sweat glands which as a result can give a smoother appearance of the skin.
- Mesotherapy products will benefit and improve skin health.

THE TOXIN

- The dilution of the toxin is the same dilution you would use for a traditional muscle relaxing treatment, this is further diluted with your other cocktail ingredients ie. Mesotherapy solutions.
- Prescription for using toxin will be required alongside medical history.
- Treatment with toxin can be carried out every 2 - 4 months depending on client skin condition and what the complaint you are treating.
- Botulinum Toxin is not licensed for this particular treatment. It is used 'off license' therefore there is no set guidelines for us to follow regarding doses. (NEW TREATMENT TO THE INDUSTRY).
- Within our clinic case studies we have used Botox 16 -20 units. It is client specific and individual assessments are needed. The Botox was diluted with 1.25 ml Bacteriostatic Saline in 50 units. **(Please note - this is not a licensed dose).**
- Assessment of results will be required to indicate further treatment, and future dosages.

LA GLOW MESO-TOX FACIAL AFTERCARE

- No further facials are recommended for at least 2 weeks after treatment.
- Avoid extreme heats, chlorine and vigorous physical activity immediately after treatment or until all redness has subsided.
- Avoid direct sun exposure for at least 48 hours.
- Cleanse twice daily with a gentle cleanser, followed by a hydrating serum. (no soap, face wipes, AHAs)
- SPF 30+ **MUST** be applied daily to the treated area for a minimum of two weeks (and is recommended daily thereafter).
- Do not apply makeup for 24-48 hours (Minerals can be used after 24) and ensure makeup brushes are hygienically clean before makeup application.
- Stop using exfoliants until at least one week after treatment
- Tanning beds should never be used.
